Molecular analyses of five new chimpanzee MHC class I alleles:
implications for differences between evolutional mechanisms of
HIA-A, -B, and -C loci
Blochem. Blophys. Res. Commun. 261 (1), 46-52 (1999)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA coding for antigen HLA B27 - and diagnostic reagents contg. such DNA, antigen or antibody
Claim 2; Page 4; 5pp; German.

Claim 2: Page 4; 5pp; German.

The DNA may be used as a hybridisation probe for detecting the HLA B27 gene, e.g. for assessing susceptibility to rheumatic disorders such as ankylosis spondylitis, or may be used to transform cells for prodn of HLA B27. The HLA B27 may be used to detect HLA B27 antibody in human serum, or to produce mono- or polyclonal HLA B27 antibodies for use in immunoassay.

THE DNA may be used to detect the HLA-B 27 gene (opt. mutated) in human genetic material. The HLA-B 27 may be used to detect anti-HLA-B 27 antibodies in human serum. The antibodies may be used to determine HLA-B 27 levels in human serum, e.g. for diagnosis of rheumatic disorders, esp. ankylosing spondylitis.

Detecting pre-disposition to seronegative spondylarthropathies - Trom the absence of a C residue at a specific position in the 3'-flanking region of the HLA B27 allele
Claim 1; Page 52-56; 68pp; Bng1sh.
C Genetic predisposition to seronegative spondyloarthropathies (SNSA) is detected by determining the absence of a cytosine nucleotide in the 3' flanking region (see also T61647-48) of an HLA-B gene at a position corresponding to nucleotide 4495 of the HLA-B27 consensus sequence given in T6163. Probes and primers (see also T61640-46) based on this region can be used in diagnostic assays to detect the genetic predisposition to SNSA, and permit the distinction of B27+ individuals who are resistant to SNSA from B27+ normal individuals who are resistant to SNSA from B27+ normal individuals sequence 6553 Bp; 1443 A; 1619 C; 2017 G; 1474 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  analysis of expression of gene structure, and prodn. of mouse model of human disease

mouse model of human disease

Disclosure: Fig 1; 8pp; Japanese.

The sequence shows the exon 2 alpha-1-domain of the human leukocyte antigen-Bw 52 gene. The complete gene may be introduced into non-human mammals, pref. rat or mouse, or their ancestors at the primary developmental biological step via transplantation into the zygote or embryo to generate transgenic non-human mammals incorporating the HiA-Bw 52 gene in both their germ cells and somatic cells. Transgenic non-human mammals contg. HIA-Bw 52 are useful for the analysis of expression of the gene, its structure, and prodn. of mouse models of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09-MAR-1993 (first entry)

Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and immunised with HLA antigen of different allotype Disclosure; Fig 1 A-G; Z0pp; English.

The human HLA-B51 gene was injected into fertilised mouse eggs and then these introduced into the uterus of a pseudo pregnant mouse. The young were tested to ensure incorporation of the gene into the chromosome, and one of them mated 3 times with a normal male to produce 16 young, seven of which carried the HLA-B51 gene. The transgeneic offspring were immunised with HLA-B51 gene. The spleen lymphocytes were fused with myeloma cells. Hybridomas
                                                                                                                                                                                                                                                                                                                                                        OCCUPAN 1991 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                       New DNA for class 1 human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc. Claim 1; Page 11; 23pp; English.

The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be obtained by introducing these DNAs into eucaryotic cells. Sequence 1086 BP; 224 A; 334 C; 356 G; 172 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New DNA for class 1 human leucocyte antigens and derived probes and transformed cells, useful for DNA typing, as immunogens etc.
Claim 2: ppil-12: 23pp: English.
The HLA class I DNA can be used a source of probes for use in DNA typing. Transformed cells, which are useful as immunogens, can be obtained by introducing these DNAs into eucaryotic cells.

This oligonucleotide probe was immobilised on a solid support. probe carries a thiol group which is covalently coupled to a photochemically removable protecting group. Many probes can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HIA-BW53 game, DNA probe and transformant cells - used for immunisation, identifying specificity of antiserum etc. Claim 1; Page 1; 11pp; Japanese.

Probes comprising part of the sequence can be used to identify Class I genes. The DNA can be expressed for immunisation of animals and prodn. of monoclonal antibodies specific for the HIA-BW53 antigen. See also J03112485 and J03112486. Sequence 1089 Bp; 222 A; 337.C; 356 G; 174 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The spleen lymphocytes were fused with myeloma cells (P3x63-Ag8.653). Hybridomas producing antibodies were selected. Sequence 1089 BP; 223 A; 336 C; 359 G; 171 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Allotype specific monoclonal anti- HLA antibodies prodn. - using hybridomas derived from transgenic animals carrying HLA gene and limmunised with HLA antigen of different allotype Disclosure; Fig 1 A-G; 20pp; English. The human HLA-BW52 gene was introduced into mouse L cells and then these cells used to immunise one of the transgenic mice (see Q05693)
                                                                                                                                                                                                                                                                                                                                                                                                                   03-JAN-1991 (first entry)
HLA-Bw52 gene for production of monoclonal antibodies.
Alloptype specific monoclonal anti-HLA antibodies; hybridomas; transgenic animals; HLA-Bw52 gene; ss.
Location/Qualifiers
exon 1.73
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length: 13

PHIA-B7 expression vector.
expression vector; pHLA-B7; heavy human HLA-B7; bicistronic mRNA;
light beta-2 microglobulin; class I major histocompatibility complex;
MHC; human leukocyte antigen; HLA; covalently closed circular DNA; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the gene is taken from the transposable element Tn903"
                   remove the protecting group and allow the probe to hybridise with a complementary sequence. Selective irradiation in defined regions will activate only those probes required/chosen to be used in a given screening of a sample solution. The invention allows simultaneous screenings for many different sequences in a single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ŏ

genetic material encoding one or more cistron(s) which express immunogenic or therapeutic peptide(s)

(laim 9; Page 42-43; Sopp; English.

This HLA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resisitance gene. The eradication of two open reading frames encoding portions of SV40 viral proteins lowers the risk of tumourigenicity. The vector may also operate as a cassette into which cistrons may be inserted and removed at will for the transcription and subsequent translation of peptides of interest. The vector is used partic. for the treatment of neoplastic disease, eg. melanoma, and provides enhanced gene delivery and expression in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     domain, derived

Claim 8; Page 134-155; 226pp; English.
Sequences encoding the 5' Hianking region of the capsular
Sequences encoding the 5' Hianking region of the capsular
polysaccharide gene (cps) of Streptococcus pneumoniae and which are
of sufficient length to allow hybridisation under standard
hybridisation conditions to a S. pneumoniae cps gene flanking region
may be used in methods to detect and serotype S. pneumoniae.
may also be used for the diagnosis and prevention of S. pneumoniae
infection. This sequence corresponds to the downstream region of
the 5' cps gene flanking region and is termed the "repeat region".
Sequence 934 BP; 311 A; 136 C; 220 G; 257 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                detection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      used

Carcinoembryonic antigen fragments - used in assays to determine the presence and amt. of the antigen in samples also contg. related antigens. Disclosure; page 4; 15pp; English.

CEA fragments can be used in assays to determine the presence and amt. of CEA in samples which also may contain related antigens including its normal cross-reacting antigen or the 128 kD antigen.

(7)1567 is the DNA sequence which encodes carcinoembryonic antigen (CEA) R60619. CEA is free from cross-reactive CEA-like antigens, it is antigenically indistinguishable from the solution form of CEA shed from tumour cells, and it is devoid of ethanolamine. R60619 can be used in reagent composition for detecting neoplastic diseases in biological samples, or in an immunoassay process where it can specifically detect the presence of tumour cells in a biological sample e.g. blood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-MAY-1995 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 major instruction.

Tractment of auto-immune disease by admin. of peptide(s) corresp. to major histocompatibility complex antigens - esp. for delaying onset of clinical symptoms of insulin dependent diabetes by modulating T cell mediated attack on target cells

Claim 7: Page 20: 24pp; English.

W07512-W07518 represent T-cell modulating peptides that can be used in the method of the invention. These sequences are based on a portion of the method of the invention. These sequences are based on a portion of the method of the invention. These sequences are based on a portion of the major histocompatability complex (MFC) class I antigem (see W07510). The method is for affecting the course of an autoimmune disease involving T-cell mediated destruction of tissue in mammals. These peptides are used especially to treat insulin-dependent diabetes mellitus, preferably being administered during the pre-clinical stage to delay onset of the disease. Other diseases that can be treated are mulitus, preferably being administered during the pre-clinical stage to delay onset of the disease. Other diseases that can be treated are mulitus, preferably being administered during the pre-clinical stage to gravis, etc. The peptides modulate T-cell mediated attack on autologous carvickines, perferins, and may also reduce inflammation, swelling, and release of cytokines, perferins, granzymes etc. associated with T cell activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                              Claim 13; Page 66; 80pp; English.

This sequence represents a fragment of a class I major histocompatibility complex (MHC) antigen. This sequence corresponds to residues 75-84 of the alpha-1 domain of the class I MHC HLA-B7. This sequence, and the peptide fragments represented by R83062-R83085, R83090-R83096 and P82907-R82913 can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subcherapeutic amount of period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or linhbit) the activity of the cytotoxic I lymphocytes (CILs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-AUG-1997 (first entry)

Will solutions of the peptide (s) - based on a class I HiA-B alpha-1 domain, used for preventing rejection of transplants or treating autofimmune diseases.

PT treating autofimmune diseases.

Example 1; Page 19; 41pp; English.

CC Peptides Wi3784-98 and Wi33778-9 were assayed for their immunomodulating cativity. A peptide-type compound or variant is claimed which has cit immunomodulating activity, including the N-terminal acylated and/or creminal anidated or esterified forms of up to 60 anino acids, where the peptide-type compound comprises the formula; A-B, where A, B = CC (R ani - T) (ani - Page) (ani - T) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19-JUN-1998 (first entry)
Peptide B7.75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation; transplantation; autoAmmune disease; Class I HIA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 51; DB 1; Length 10; 100.0%; Pred.
